

You may have seen a number of We Energies and Asplundh crews in and around South Milwaukee recently. It's all part of our work to improve the reliable service we provide our customers across the city. We're taking a number of steps to help keep the lights on when Mother Nature brings severe weather. We are examining our power lines and equipment to ensure everything is working properly, and we are trimming trees near our power lines — that helps keeps large branches from falling into our equipment during a storm.

So far, our specialized forestry crews have trimmed trees along several miles of power lines in South Milwaukee. The next phase of the work will be on private property and will require special equipment and access to customers' backyards. We will reach out to those customers as we get to these locations. Overall, we will be trimming over 7 miles of our overhead lines in South Milwaukee.

We are committed to serving all of our customers and providing them the affordable, reliable and clean energy they depend on. While we do all we can to keep the lights on, sometimes severe weather strikes. We encourage all of our customers to download our free mobile app and enroll in outage alerts to get the latest information on power outages and restoration times.
